Vetmove Use Case (Admin) Version 2.0

Use Case: Maintain website and keep information up to date

Primary Actor: Website Administrator

Scope: Vetmove Admin Page and DB

Level: User goal

Brief: The website and DB administrator updates the names of the moving companies and their rates in the back-end and makes small UI/UX changes to the front-end.

Stakeholders: Website users (Military Personnel, Veterans, and their families), website administrators, moving companies, rental companies.

Postconditions: Database is updated when moving company information and rates change

Preconditions: Website administrator has access to DB and front-end source code.

Triggers: Inability to access current moving rates and truck rates with discounts.

Basic flow:

1. Login

2. Gather information

3. Update database

4. Update front-end

5. Database and front-end updated.

Extensions: … (variations on basic flow)

1. Get access to database and front-end source code.
2. Research new moving companies and rental companies and update current rates and discounts.
3. Update "mover" table in mySQL Workbench with new companies and rates/discounts.
4. Change design based on feedback or necessary changes.

Use Case Diagram

Research new companies, rates, and discounts monthly

Update mySQL database tables with new movers and rates monthly. (Includes discounts)

Update front-end design with new pages such as review page with move reference # and checklist

Manages access to database accounts for other website administrators

Website Administrator
